

# **Reading a Relative file directly or sequentially.**

## **Example program**

**Click to view.**

When viewing the program left click (or press the Page Up key) to see next comment and right click (or press Page Down) to see the previous comment.

\$ SET SOURCEFORMAT"FREE"

## First

Let's examine any new  
ACCESS MODE IS  
DYNAMIC means that we  
expect to access this file  
both directly and  
sequentially.

Take note of the  
condition name  
monitoring the  
SupplierStatus.  
A code of 00 means the  
operation was successful.

PROCEDURE DIVISION.

BEGIN.

OPEN INPUT SupplierFile.

DISPLAY "Enter Read type (Direct=1, Seq=2)-> "  
WITH NO ADVANCING.  
ACCEPT ReadType.

IF DirectRead

DISPLAY "Enter supplier key (2 digits)-> "  
WITH NO ADVANCING

ACCEPT SupplierKey

READ SupplierFile

INVALID KEY DISPLAY "SUPP STATUS :-",  
SupplierStatus

END-READ

PERFORM DisplayRecord

END-IF

IF SequentialRead

READ SupplierFile NEXT RECORD

AT END SET EndOfFile TO TRUE

END-READ

PERFORM UNTIL EndOfFile

PERFORM DisplayRecord

READ SupplierFile NEXT RECORD

AT END SET EndOfFile TO TRUE

END-READ

END-PERFORM

END-IF

CLOSE SupplierFile.

STOP RUN.

DisplayRecord.

IF RecordFound

MOVE SupplierCode TO PrnSupplierCode

MOVE SupplierName TO PrnSupplierName

MOVE SupplierAddress TO PrnSupplierAddress

DISPLAY PrnSupplierRecord

END-IF.

First we find out how the user wants to read the file.

To read the file directly the user must supply a key.

To read the file sequentially we use a standard "Read Ahead" and loop.

**Note:** The READ..NEXT RECORD is used when we want to read the file sequentially and the ACCESS MODE is DYNAMIC
