

```
$ SET SOURCEFORMAT"FREE"
IDENTIFICATION DIVISION.
PROGRAM-ID. Sequence-Program.
AUTHOR. Michael Coughlan.
```

Compiler Directive. Directs the compiler to ignore the coding rules.

IDENTIFICATION DIVISION.
An area of the program used to supply information about the program to both the COBOL compiler and the programmer.

```
DATA DIVISION.
WORKING-STORAGE
01  Num1
01  Num2
01  Result
```

DATA DIVISION.
An area of the program used to define/declare the data items that are to be used in the program.
The data items shown are declared using the format of ;
Level Number
Data-Item Name

PR
Ca
Non-Structured
items should have
level number of 01

Data-Item Name

Storage Declaration
Data items are declared using a kind of declaration by example. In this case 99 declares storage sufficient to hold values between 99 (i.e. two digits)

Value Clause
In this case the Value Clause assigns an initial value of 00 to the data item.

```
DISPLAY "Result is -"
STOP RUN.
```

```
$ SET SOURCEFORMAT"FREE"
```

```

```
MULTIPLY Num1
```

```
DISPLAY "Result"
```

```
STOP RUN.
```

PROCEDURE DIVISION.

The PROCEDURE DIVISION is the area of the program where we write our algorithmic solution to the problem to be solved.

A Paragraph Name

A name given to a section of

ACCEPT from keyboard

Takes data typed at the keyboard by the user and places it into the data item (Num1 or Num2)

manipulate the values of items.

Arithmetic Calculation

This calculation multiplies the value in Num2 and places it into Num1. I suppose you know that.

DISPLAY to screen

This statement writes the specified text and the contents of the data item Result to the computer screen.
