

# Converting example

INSPECT StringData

CONVERTING "fxtd" TO "ZYAB".

Each subject character is associated with its target character

**INSPECT** `StringData`

**CONVERTING** "fxt d" TO "ZYAB".

Each subject character is associated with its target character

**INSPECT** `StringData`

**CONVERTING** `"fxtd"` TO `"ZYAB"`.

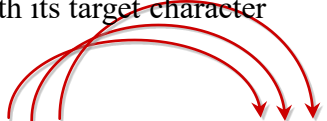

The diagram consists of two red curved arrows. The first arrow starts at the 'f' in 'fxtd' and points to the 'Z' in 'ZYAB'. The second arrow starts at the 'x' in 'fxtd' and points to the 'Y' in 'ZYAB'. The target string 'ZYAB' is written in red, while the source string 'fxtd' and the word 'CONVERTING' are in black.

Each subject character is associated with its target character

**INSPECT** `StringData`

**CONVERTING** `"fxtd"` TO `"ZYAB"`.

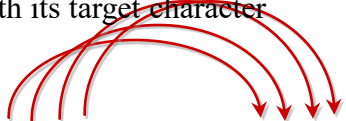

The diagram consists of three red curved arrows pointing from the source string "fxtd" to the target string "ZYAB". The first arrow connects 'f' to 'Z', the second connects 'x' to 'Y', and the third connects 't' to 'A'. The character 'd' in the source string does not have an arrow pointing to it, and the character 'B' in the target string does not have an arrow pointing to it. The target string "ZYAB" is rendered in red text.

Each subject character is associated with its target character

**INSPECT** `StringData`

**CONVERTING** `"fxtd"` TO `"ZYAB"`.

The diagram illustrates the character mapping from the source string "fxtd" to the target string "ZYAB". Four red curved arrows originate from the characters of "fxtd" and point to the corresponding characters in "ZYAB": 'f' maps to 'Z', 'x' maps to 'Y', 't' maps to 'A', and 'd' maps to 'B'. The target string "ZYAB" is rendered in red text.
